

**PANORAMA RIDGE- EXPLORATION UPDATE**

(Vancouver, Canada), Leonard W. Saleken, President of Goldcliff Resource Corporation (GCN.TSXV), announces the successful completion of the exploration program on the Company's 100% owned Panorama Ridge gold property near Hedley, B.C. The trenching and drilling objectives for the 2006 field season were achieved on Panorama Ridge.

Trenching and drilling on Panorama Ridge were conducted on the York-Viking, Nordic, Spar, Tower and Thor gold zones. A total of 60 trenches (1,450 meters) were excavated and channel sampled at one metre intervals. A total of 25 core drill holes (2,213 metres) were drilled. All of the trench samples are in for assay. The sampling and geological logging of the core is in process. An initial batch of core samples has been dispatched to the assay laboratory for sample preparation and analyses. Unfortunately, the lab is backed up due to the busy exploration season in BC, and the assay results have been slightly delayed.

Goldcliff is eagerly looking forward to these results, and as they are received and compiled they will be released to the public. Goldcliff is awaiting results on 75 per cent of its 2006 trench samples.

Leonard W. Saleken, PGeo, is the qualified person as defined by National Instrument 43-101 who supervised the preparation and verification of the technical information in this release.
