NORDIC TRENCHING LOOKING FOR MORE HIGH-GRADE GOLD AT PANORAMA RIDGE

(Vancouver, Canada), Leonard W. Saleken, President of Goldcliff Resource Corporation (GCN.TSXV), announces that exploration trenching has commenced on the Nordic Zone on the Company's 100% owned Panorama Ridge gold property near Hedley, B.C. Several trenches have already been excavated at the York-Viking gold zone and samples have been shipped to the assay laboratory for analysis. Past trench sampling on the Nordic Zone has returned 70 metres containing 1.53 grams per tonne gold, including 2.04 grams per tonne gold over 45.40 metres, the highlight being 3.00 metres of 15.60 grams per tonne gold, which includes 26.50 grams gold over one metre.

The Nordic Zone gold mineralization has been encountered in three trenches (2005) and two drill holes (2003). The gold zone covers an area 30 metres NW-SE and 70 metres NE-SW. It is open to the north-east and to the south-east. All three trenches were excavated and sampled along the NE-SW direction of the gold zone. Trench ND56 is the upper trench and ND83/91 is the lower trench. All three trenches are located along the south-east, steeply dipping hillside at the northern end of Panorama Ridge. The Nordic Zone is located 300 metres north-east of the York-Viking Zone.

The trench gold sample results (previously reported) from the three trenches are as follows:

Trench	From (m)	To (m)	Interval (m)	Gold (g/t)
ND56	0.00	70.00	70.00	1.53
Includes	0.00	45.40	45.40	2.04
And	5.00	18.00	13.00	5.14
Includes	5.00	13.00	8.00	7.51
Includes	8.00	11.00	3.00	15.60
Includes	10.00	11.00	1.00	26.50
ND74	0.00	55.50	55.50	0.98
Includes	10.00	33.00	23.00	1.96
And	13.00	30.00	17.00	2.26
Includes	15.00	21.00	6.00	3.01
Includes	18.00	21.00	3.00	4.17
Includes	20.00	21.00	1.00	8.98
ND83/91	0.00	36.00	36.00	1.46
Includes	0.00	10.00	10.00	0.89
Includes	10.00	24.00	14.00	2.44
And	10.00	12.00	2.00	5.01
Includes	24.00	36.00	12.00	0.23

The Nordic Zone gold mineralization has a close similarity to the gold mineralization encountered in the Nickel Plate's underground ore-body. The Nickel Plate ore-body was high in gold, arsenic, tellurium, bismuth, cobalt and nickel. The Nordic Zone is also high in these elements. The Nickel Plate ore-body and the Nordic Zone have similar structural geology. The 2006 trenching and drilling is anticipated to clarify both the continuity of gold mineralization and the structural setting.

The 2006 exploration program is financed in large part by the recently completed flow through share offering which resulted in gross proceeds of \$742,650.
