GOLDCLIFF FINALIZES DRILL PLANS FOR NEW EAST BRECCIA GOLD-SILVER TARGET AT KETTLE VALLEY

Vancouver, B.C. – George Sanders, President of Goldcliff Resource Corporation ("Goldcliff" or the "Company") (TSX.V: GCN | OTC: GCFFF), reports that the Company is finalizing arrangements for a drill program at the Kettle Valley gold/silver project, expected to commence later this month. The focus of this program will be on the newly located East Breccia zone. It is anticipated that several short drill holes (<120 metres) can test this high priority area of surface mineralization.

Detailed sampling conducted in May of this year located a cluster of gold/silver mineralized rock samples. These occur within strong carbonate to carbonate-quartz breccias and veins believed to occur along and proximal to fault zones cutting feldspar-megacrystic rhyolite or granite. This sampling was discussed in Goldcliff's most recent news release dated September 1, 2026. Contingent on drill site and core facility preparation it is anticipated that crews will mobilize to the property during the last week of September and that drilling will occur in October. Given the property's favourable location exploration work can be conducted into November.

Warner Gruenwald, P.Geo., a Qualified Person as defined by National Instrument 43-101, has reviewed and approved the technical information contained in this news release. Mr. Gruenwald is an independent consulting geologist to the Company.
